*Designed for
computer users*

HOYA
Premium Optical Lenses

Designed by **Computer Users** for **Computer Users**

Standard reading glasses have been the choice for many wearers for near vision tasks and computer use. However reading glasses only offer a limited area of vision. 'PC Pro' has been specifically designed with a greater depth of view, that extends the clear vision area.

Your computer is usually positioned outside the near vision area, and as a result, standard reading glasses can sometimes blur your vision when looking at a computer screen. The superior design of PC Pro makes it the perfect option for anyone who uses a computer, offering dramatically less distortion in the near and intermediate.

Long term computer and laptop use or intense reading can tire and strain the eyes, if incorrect glasses are worn. PC Pro offers a significantly deeper field of view than reading glasses, and wider vision than multi-focal glasses.

If you experience eye strain, headaches or difficulty with your vision when using a computer, PC Pro is your solution for complete comfort during long periods of wear.

Why choose **PC Pro**?

- * Designed specifically for computer use offering advanced visual performance
- * Offers the best overall visual experience with less distortion
- * Reduces eye strain and headaches
- * Comfortable to wear for extended periods of time
- * A greater depth of vision than standard reading glasses
- * Perfect for any near vision task

PC Pro vs. Standard Reading Lens

PC Pro provides you with a greater depth of view. Standard reading lenses are limited to wide vision only in the near.

- * **Do you use a computer for extended periods of time?**
- * **Do you experience unclear vision when using a computer?**
- * **Do you suffer from eye strain or headaches?**

Your solution is *PC PRO* *
